

“ **Data Protection** is  
at the forefront of  
every IT initiative ”

### Keep 3 Copies

Keep 3 copies of any important file, 1 primary & 2 backups

### In 2 Locations

Keep the files on 2 different media types to protect against different types of hazards

### Store 1 Copy Offsite

One of those locations being offsite

**SecureDR** is a centralised solution, managed from our Security Operations Centre - SOC. With **SecureDR your data will be protected** whether it is hosted in the **Cloud** or in a **Physical** or **Virtual environment**. With multiple levels of redundancy, our Data Centres are **purpose built, modern, reliable, energy efficient and secure**. Operating from a Data Centre that boasts a tier 3+ rating and one that currently hosts the data of many government organisations, ensures that your data is always secure.

**SecureDR** uses the **3:2:1 retention strategy**. That is, **three copies** of your data, located in **two locations** with **one of those locations being offsite**. With **SecureDR** we can recover lost data, a failed server or a totally failed site.
