

SECCOM GLOBAL MANAGED SERVICES

SecureSTREAM

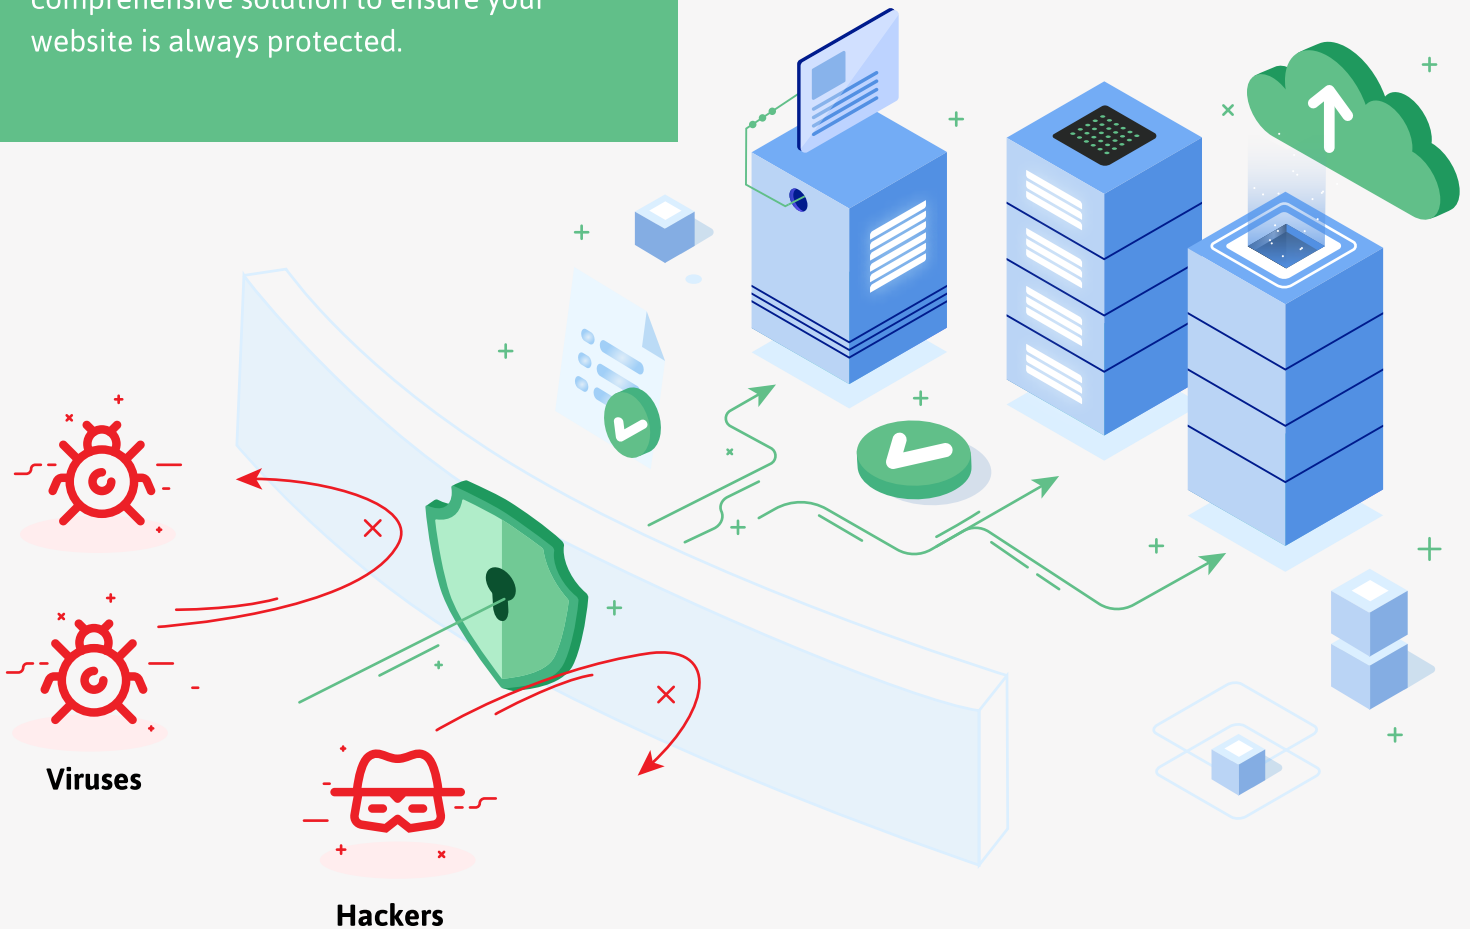

Cloud Delivered Web Application Firewall

The need for applications to be continually available is **exposing organisations** to the risk of **data breach** and **financial loss**. **Organisations** under pressure to deliver solutions faster are **bypassing security** controls in their development cycle making the web application itself more **vulnerable**.

SecureSTREAM our **Cloud delivered Web Application Firewall service** provides a comprehensive solution to ensure your website is always protected.

With limited resources or development pressures it is not always possible to secure your website through code. Hackers will find and expose vulnerabilities in your website. Implementing inline technologies like **SecureSTREAM** will minimise this risk.

Exceptional Support

Access to our support team 24 x 7 x 365

Feature Rich

Enterprise solution delivered in the Cloud

Reporting

Weekly management reports & knowledge sharing from Seccom SOC

Cost Effective

Predictable & Consistent Operational Costs

“ **SecureSTREAM** provides a **layered Cloud delivered service** for protecting your ecommerce sites ”

SecureSTREAM utilises multiple technologies to protect your site. These include **Next Generation Firewalls, Web Application Firewalls (WAF)** and **Application DDoS protection**, all delivered as a **Cloud service**. Developing an enterprise level service like **SecureSTREAM** in house is expensive, requiring specialist technical expertise. Utilising our managed **SecureSTREAM** solution is much more **cost effective** and stress free.
